This report has been prepared solely for portfolio and learning purposes. All testing activities were performed on the publicly available version of the Swiggy mobile application.

Swiggy Testing Report

1. Project Overview

Application: Swiggy Food Delivery Mobile Application

Prepared By: Natlie N. Pinto

Project Type: Manual QA Testing Project

Testing Type:

- Functional Testing
- UI Testing
- Usability Testing
- Exploratory Testing

Objective:

To verify the functionality, usability, and user interface of the Swiggy mobile application by testing core features such as restaurant search, cart management, order placement, payments, order tracking, notifications, and account settings.

2. Scope

The testing scope included the evaluation of the following modules and functionalities:

- Authentication (Login, Signup & OTP Verification)
- Location Management
- Home Screen
- Restaurant Search
- Food Item Search
- Filters & Sorting
- Restaurant Details
- Cart Management
- Checkout Process
- Payment Functionality
- Order Tracking
- Contact Delivery Partner
- Notifications
- Coupons & Discounts
- Reorder Functionality
- Profile & Settings

- Navigation Testing
- User Interface (UI) Testing
- Usability Testing
- Exploratory Testing

3. Test Environment

Parameter	Details
Application	Swiggy
Platform	Android
Testing Type	Manual Functional Testing
Device	Samsung Galaxy M32
Android Version	13
Network	Wi-Fi / Mobile Data

4. Test Scenarios

Authentication Module

- TS-001 Verify login using valid mobile number.
- TS-002 Verify login using invalid mobile number.
- TS-003 Verify OTP verification with valid OTP.
- TS-004 Verify OTP verification with invalid OTP.
- TS-005 Verify login with empty mobile number field.
- TS-006 Verify new user registration.
- TS-007 Verify previously registered mobile number is automatically suggested during login.
- TS-008 Verify Resend OTP functionality after timer expiry.

Location Module

- TS-009 Verify automatic location detection.
- TS-010 Verify manual location selection.
- TS-011 Verify behavior when location permission is denied.
- TS-012 Verify new address can be added.

Home Screen Module

- TS-013 Verify restaurant listings are displayed.

TS-014 Verify food categories are displayed.
TS-015 Verify promotional banners are displayed.
TS-016 Verify home screen refresh functionality.

Search Module

TS-017 Verify restaurant search using valid keyword.
TS-018 Verify food item search using invalid keyword.
TS-019 Verify search with special characters.
TS-020 Verify recent searches functionality.
TS-021 Verify search results for temporarily unavailable menu items.

Filters & Sorting Module

TS-022 Verify restaurants are filtered based on the selected minimum rating.
TS-023 Verify filter by delivery time.
TS-024 Verify restaurants are sorted by cost from Low to High.

Restaurant Details Module

TS-025 Verify restaurant details page opens successfully.
TS-026 Verify veg mode functionality.
TS-027 Verify item details are displayed correctly.
TS-028 Verify restaurant ratings and reviews are visible.

Cart Module

TS-029 Verify adding item to cart.
TS-030 Verify removing item from cart.
TS-031 Verify updating item quantity.
TS-032 Verify final payable amount is calculated correctly.
TS-033 Verify cart persistence after app restart.

Checkout Module

TS-034 Verify checkout page opens successfully.
TS-035 Verify delivery address selection.
TS-036 Verify order summary details.

Payment Module

TS-037 Verify payment using Google Pay UPI.
TS-038 Verify payment using Credit/Debit Card.
TS-039 Verify Cash on Delivery option.
TS-040 Verify failed payment handling.

TS-041 Verify order creation after successful payment.

Order Tracking Module

TS-042 Verify order status updates.

TS-043 Verify live order tracking.

TS-044 Verify delivery partner details are displayed.

TS-045 Verify the order status is updated to "Delivered" upon successful delivery.

TS-046 Verify user can message the delivery partner.

Notifications Module

TS-047 Verify order confirmation notification.

TS-048 Verify order status update notifications.

TS-049 Verify notification redirection.

Coupons & Discounts Module

TS-050 Verify valid coupon code application.

TS-051 Verify invalid coupon code handling.

TS-052 Verify discount calculation after coupon application.

Reorder Module

TS-053 Verify user can reorder a previously placed order.

Profile & Settings Module

TS-054 Verify updating the user's name.

TS-055 Verify address management.

TS-056 Verify logout functionality.

5. Test Cases

Test case ID	Test Scenario	Preconditions	Steps	Expected Results	Actual Results	Status
TC-001	Verify login using valid mobile number	User has a registered mobile number	1. Open Swiggy 2. Tap Login 3. Enter a valid mobile number 4. Request	User should be logged in successfully.	User logged in successfully	Pass

			OTP 5. Enter valid OTP 6. Tap Verify			
TC-002	Verify login using invalid mobile number	User is on Login screen	1. Open Swiggy 2. Tap Login 3. Enter an invalid mobile number 4. Request OTP	Appropriate validation message should be displayed	Validation message displayed	Pass
TC-003	Verify OTP verification with valid OTP	Valid OTP has been generated	1. Enter registered mobile number 2. Request OTP 3. Enter valid OTP 4. Tap Verify	User should be authenticated successfully	User authenticated successfully	Pass
TC-004	Verify OTP verification with invalid OTP	OTP screen is displayed	1. Enter registered mobile number 2. Request OTP 3. Enter invalid OTP 4. Tap Verify	Error message should be displayed	Error message displayed	Pass
TC-005	Verify login with empty mobile number field	User is on Login screen	1. Open Swiggy 2. Leave mobile number field blank 3. Tap Continue/Login	User should receive a validation message	Validation message displayed	Pass
TC-006	Verify new user registration	User does not have a registered	1. Open Swiggy 2. Enter	User should receive OTP and get logged	User received OTP and successfully	Pass

		mobile number	mobile number 3. Tap on continue 4. Verify OTP	in into the app	logged in the app	
TC-007	Verify previously registered mobile number is automatically suggested during login	User has previously logged into Swiggy using a registered mobile number on the device	1. Open Swiggy 2. Tap Login 3. Observe the login screen 4. Tap the suggested registered mobile number displayed in the pop-up	The registered mobile number should be automatically populated in the mobile number field, allowing the user to continue the login process	The registered mobile number was automatically populated in the mobile number field	Pass
TC-008	Verify Resend OTP functionality after timer expiry	User has entered a valid mobile number and is on the OTP verification screen	1. Open Swiggy 2. Enter a valid mobile number 3. Tap continue 4. Wait for the OTP countdown timer to expire 5. Tap Resend OTP 6. Check whether a new OTP is received	The Resend OTP button should become enabled after the timer expires, and a new OTP should be sent successfully	The Resend OTP button became enabled after the timer expired, and a new OTP was received successfully	Pass
TC-009	Verify automatic location detection	User is logged into the app	1. Open swiggy 2. Grant access to location 3. Wait for the application to detect the current location	Location must be detected correctly automatically	Correct location detected automatically	Pass

TC-010	Verify manual location selection	User is logged into the app	1. Open Swiggy 2. Tap the current location displayed on the home screen 3. Select the option to choose the location manually 4. Search for or select a location from the available list 5. Confirm the selected location.	The selected location should be updated successfully and displayed as the current delivery location	The manually selected location was updated successfully and displayed as the current delivery location	Pass
TC-011	Verify behaviour when location permission is denied	User is logged into the app	1. Open Settings and deny location access to Swiggy 2. Open Swiggy 3. Observe the application's behavior 4. Attempt to search for or set a delivery location manually	The application should notify the user that location permission is denied and provide an option to enable location access or allow the user to select a location manually	The application displayed a prompt indicating that location permission was denied and allowed the user to select a location manually	Pass
TC-012	Verify new address can be added	User is logged into the app	1. Open Swiggy 2. Click on the selected location 3. Tap on add new address	User should be able to add a new address	User is able to add new address	Pass
TC-013	Verify	User is logged	1. Open	A list of	The restaurant	Pass

	restaurant listings are displayed	into the Swiggy application and a delivery location has been selected	Swiggy 2. Ensure a valid delivery location is selected 3. Navigate to the Home screen 4. Observe the list of restaurants displayed	restaurants available for the selected delivery location should be displayed with relevant details	listings were displayed correctly along with their relevant details	
TC-014	Verify food categories are displayed	User is logged into the Swiggy application and a delivery location has been selected	1. Open Swiggy 2. Ensure a valid delivery location is selected 3. Navigate to the Home screen 4. Observe the list of food categories displayed at top	The application should display all available food categories at the top of the Home screen, and each category should be visible and accessible	The food categories were displayed correctly at the top of the Home screen and were accessible	Pass
TC-015	Verify promotional banners are displayed	User is logged into the Swiggy application and a delivery location has been selected	1. Open Swiggy 2. Navigate to home screen 3. Observe various banners displayed	The application should display promotional banners relevant to the user, and the banners should load correctly	The promotional banners were displayed correctly without any display issues.	Pass
TC-016	Verify home screen refresh functionality	User is logged into the Swiggy application and a delivery location has been selected	1. Open the Swiggy 2. Navigate to the Home screen 3. Swipe down on the Home screen to refresh the	The Home screen should refresh successfully, and the latest content should be loaded without any errors or	The Home screen refreshed successfully, and the latest content was loaded without any errors	Pass

			content 4. Wait for the refresh process to complete 5. Observe the Home screen	application crashes		
TC-017	Verify restaurant search using valid keywords	User is logged into the Swiggy application and a delivery location has been selected	1. Open the Swiggy 2. Navigate to search bar 3. Type "Subway" 4. Observe the results	The application should display restaurant(s) matching the entered keyword, allowing the user to select and view the restaurant details	The application displayed the relevant Subway restaurant(s), and the restaurant details were accessible upon selection	Pass
TC-018	Verify food item search using invalid keyboard	User is logged into the Swiggy application and a delivery location has been selected	1. Open the Swiggy 2. Navigate to search bar 3. Type "1475gyr" for example 4. Observe result	A message saying couldn't find any results for "1475gyr" should be displayed	Error message is displayed without any app crash	Pass
TC-019	Verify search with special characters	User is logged into the Swiggy application and a delivery location has been selected	1. Open the Swiggy 2. Navigate to search bar 3. Type "@#%?:" for example 4. Observe result	A message saying couldn't find any results for "@#%?:" should be displayed	Error message is displayed without any app crash	Pass
TC-020	Verify recent searches functionality	User is logged into the Swiggy application has performed previous	1. Open Swiggy 2. Tap Search bar 3. Observe recent search section	Previously searched food items/ restaurants must be displayed in the recent	Previously searched food items/ restaurants are displayed in the recent searches list	Pass

		searches		searches list		
TC-021	Verify search results for temporarily unavailable menu items	User is logged into the Swiggy application location has been selected	1. Open the Swiggy 2. Navigate to the Search page. 3. Search for a food item that is temporarily unavailable (e.g., a breakfast item during dinner hours or an item marked as unavailable by the restaurant) 4. Observe the search results.	The application should display the searched item with an appropriate indication that it is currently unavailable or clearly inform the user that the item cannot be ordered at the moment	The application displayed the searched item with an indication that it was currently unavailable	Pass
TC-022	Verify restaurants are filtered based on the selected minimum rating	User is logged into the Swiggy application location has been selected	1. Open Swiggy 2. Navigate to Search or Restaurants 3. Open Filters 4. Select Rating 4.0+ 5. Apply the filter 6. Observe the restaurant list	Only restaurants meeting the selected minimum rating criteria should be displayed	Only restaurants meeting the selected minimum rating criteria are displayed without any app crashes	Pass
TC-023	Verify filter by fastest delivery time	User is logged into the Swiggy application location has been selected	1. Open Swiggy 2. Navigate to Search or Restaurants 3. Open Filters 4. Select delivery time	Restaurants with quickest delivery time should be shown first with increasing delivery time	Restaurants with quickest delivery time are shown first with increasing delivery time	Pass
TC-024	Verify restaurants are	User is logged into the	1. Open the Swiggy	The application should display	The restaurants	Pass

	sorted by cost from low to high	Swiggy application location has been selected	2. Navigate to Search or Restaurants page 3. Tap Sort. Select Cost: Low to High. 4. Apply the sorting option.	restaurants in ascending order of their cost, with lower-priced restaurants appearing before higher-priced restaurants	were displayed in ascending order based on their cost.	
TC-025	Verify restaurant details, page open successfully	User is logged into the Swiggy application and has opened a restaurant page	1. Open the Swiggy 2. Navigate to restaurant page 3. Click on any restaurant	The application should display restaurant details, opening time along with the food items	The application displayed restaurant details, opening time along with the food items	Pass
TC-026	Verify veg mode functionality	User is logged into the Swiggy application and has opened a restaurant page	1. Open the Swiggy 2. Navigate to restaurant page 3. Click on any restaurant 4. Toggle on the veg mode option	Only the veg food items present should be displayed to the user without any non veg food item	Only the veg food items are displayed to the user	Pass
TC-027	Verify item detail details are displayed correctly	User is logged into the Swiggy application and has opened a restaurant page	1. Open the Swiggy 2. Navigate to restaurant page 3. Click on any restaurant 4. Click on any food item	The details such as price, with concise description of the product and quantity should be shown	Correct details of the food item were shown without any errors	Pass
TC-028	Verify restaurant ratings are visible	User is logged into the Swiggy application and has opened a	1. Open the Swiggy 2. Navigate to restaurant page 3. Click on any	The relevant restaurant ratings should be displayed to the user	The appropriate ratings are shown	Pass

		restaurant page	restaurant			
TC-029	Verify adding item to cart	User is logged into the Swiggy application and has opened a restaurant page	1. Open the Swiggy 2. Select any restaurant 3. Select a food item 3. Tap "ADD" 4. Select the required quantity	The selected food item should be added to the cart with the selected quantity	The selected food item was successfully added to the cart with the selected quantity	Pass
TC-030	Verify removing item from cart	User is logged into the Swiggy, has opened a restaurant page, and has only one food item in the cart	1. Open the Swiggy 2. Navigate to the Cart 3. Tap the "-" button to remove the food item from the cart	The application should remove the item from cart and the cart should get empty	The item gets removed from the cart successfully	Pass
TC-031	Verify updating item quantity	User is logged into the Swiggy and has at least one food item in the cart	1. Open the Swiggy 2. Navigate to the Cart 3. Tap the "+" button to increase the quantity of the food item	The quantity of the selected food item should be updated successfully, and the cart total should be recalculated accordingly	The quantity of the selected food item was updated successfully, and the cart total was recalculated correctly	Pass
TC-032	Verify final payable amount is calculated correctly	User is logged into the Swiggy and has 2 food items in the cart	1. Open Swiggy 2. Navigate to cart 3. Observe the item subtotal, delivery charges, platform fee, taxes (if any), discounts (if any), and the	The final payable amount should be calculated accurately based on the item subtotal, applicable delivery charges, platform fee, taxes, and	The final payable amount was calculated correctly based on all applicable charges and discounts	Pass

			final payable amount	discounts		
TC-033	Verify persistence after app restart	User is logged into the Swiggy and has at least one food item in the cart	1. Open Swiggy 2. Navigate to cart 3. Before proceeding for payment close the app and open it again	The cart should consist the food item(s) added by the user even after restart	The food items in the cart remained consistent even after app restart	Pass
TC-034	Verify check out page open successfully	User is logged into the Swiggy and has at least one food item in the cart	1. Open Swiggy 2. Navigate to cart 3. Tap on proceed to pay	User should be directed to the payment page showing options for UPI, COD, credit/debit card	User is directed to the payment page with relevant payment options	Pass
TC-035	Verify delivery address selection	User is logged into the Swiggy, has at least one food item in the cart, and has proceeded to the checkout page	1. Open the checkout page 2. Tap the delivery address section 3. Select a different saved address or add a new address 4. Confirm the selected address	The selected delivery address should be updated successfully and displayed as the delivery address for the order	The selected delivery address was updated successfully and displayed correctly.	Pass
TC-036	Verify order summary details	User is logged into the Swiggy, has at least one food item in the cart, and has proceeded to the checkout page	1. Open the checkout page 2. Navigate to order summary section 3. Review the displayed order details	The Order Summary should accurately display the selected food items, quantities, item prices, delivery address,	All order details were displayed accurately in the Order Summary	Pass

				applicable charges, discounts (if any), and the final payable amount		
TC-037	Verify payment using Google Pay UPI	User has at least one food item in the cart and has proceeded to the payment page	1. Open the payment page 2. Select Google Pay (UPI) 3. Tap Proceed to Pay 4. Complete the payment through the Google Pay	The application should redirect the user to Google Pay, allow the payment to be completed successfully, and return the user to Swiggy with a payment success confirmation	The user was redirected to Google Pay, completed the payment successfully, and was redirected back to Swiggy with a payment success confirmation	Pass
TC-038	Verify payment using credit/debit card	User has at least one food item in the cart and has proceeded to the payment page	1. Open the payment page 2. Select credit or debit card 3. Tap on add new card 4. Add the required details	The application should accept the valid card details, process the payment successfully, and display a payment success confirmation	The application accepted the valid card details, processed the payment successfully, and displayed a payment success confirmation	Pass
TC-039	Verify cash on delivery option	User has at least one food item in the cart and has proceeded to the payment page	1. Open the payment page 2. Select pay on delivery 3. Tap on place order	The application should accept the Cash on Delivery payment option, place the order successfully, and display an order confirmation	The application accepted the Cash on Delivery payment option, placed the order successfully, and displayed the order	Pass

					confirmation	
TC-040	Verify failed payment handling	User has at least one food item in the cart and has proceeded to the payment page	1. Open the payment page 2. Select any online payment method 3. Tap proceed to pay 4. Simulate a payment failure by cancelling the payment 5. Return to the application and observe the payment status	The application should display an appropriate payment failure message, the order should not be placed, and the user should be provided with an option to retry the payment or select another payment method	The application displayed a payment failure message, the order was not placed, and the user was given the option to retry the payment	Pass
TC-041	Verify order creation and successful payment	User has at least one food item in the cart and has completed payment successfully	1. Complete the payment using any available payment method 2. Wait for the payment to be processed 3. Observe the order confirmation screen 4. Navigate to the My Orders section	The application should create the order successfully, display an order confirmation with the order details, and list the newly placed order under My Orders	The application created the order successfully, displayed the order confirmation, and the order appeared in the My Orders section	Pass
TC-042	Verify order status updates	User has completed the payment successfully, and the order has been placed	1. Complete the payment 2. Go to my orders 3. Select the placed order 4. Observe the order status	The application should update the order status accurately at each stage of the delivery process (e.g.,	The application updated the order status accurately throughout the delivery process until	Pass

				Order Confirmed, Preparing, Out for Delivery, Delivered) until the order is successfully delivered	the order was successfully delivered	
TC-043	Verify live order tracking	User has completed the payment successfully, and the order has been placed	1. Complete the payment 2. Navigate to my orders 3. Select the placed order 4. Tap on track your order	The application should display the live location and current delivery status of the order, updating the tracking information accurately until the order is delivered	The application displayed the live location and current delivery status accurately throughout the delivery process	Pass
TC-044	Verify delivery partner details are displayed	User has completed the payment successfully, and the order has been placed	1. Complete the payment 2. Navigate to my orders 3. Select the placed order 4. Observe the delivery partner details	The application should display the delivery partner's details, such as the name, contact information (if applicable), and delivery status	The application displayed the delivery partner's details correctly on the order tracking screen	Pass
TC-045	Verify the order status is updated to "Delivered" upon successful delivery	User has completed the payment successfully, and the order has been placed	1. Complete the payment successfully 2. Navigate to the my orders section 3. Select the placed order 4. Observe the final delivery status after the order has	The application should update the final order status to "Delivered" once the order has been successfully delivered	The application updated the final order status to "Delivered" after the order was successfully delivered.	Pass

			been delivered			
TC-046	Verify if user can message the delivery partner	User has completed the payment successfully, and the order has been placed	1. Complete the payment 2. Navigate to my orders 3. Select the placed order 4. Tap the chat option available in the delivery partner section.	The application should navigate the user to a chat screen, allowing them to communicate with the delivery partner	The application navigated the user to the chat screen, allowing communication with the delivery partner	Pass
TC-047	Verify order confirmation notification	User has completed the payment successfully	1. Complete the payment 2. Wait for the order to be confirmed 3. Drag down the notification panel and observe	The application should provide an order confirmation notification to the user	The application provided an order confirmed notification showing acceptance	Pass
TC-048	Verify order status update notification	User has completed the payment successfully, and the order has been placed	1. Place an order successfully 2. Wait for the order status to change (e.g., Preparing, Out for Delivery, Delivered) 3. Open the notification pane 4. Observe the received notification	The application should send a notification whenever the order status changes, displaying the updated order status to the user.	The application sent order status update notifications whenever the order status changed	Pass
TC-049	Verify notification redirect	User has completed the payment successfully, and the order	1. Place an order successfully 2. Wait for notification	The application should redirect the user to the corresponding order details or	The application redirected the user to the corresponding	Pass

		has been placed	3. Click on the received notification	order tracking screen when the notification is tapped	order details screen after the notification was tapped	
TC-050	Verify valid coupon code application	User is logged into the Swiggy, has at least one food item in the cart, and has proceeded to the Checkout page	1. Open the Checkout page. 2. Tap Apply Coupon 3. Enter a valid coupon code 4. Tap Apply	The application should accept the valid coupon code, apply the eligible discount, and display a confirmation message	The application accepted the valid coupon code, applied the eligible discount, and displayed the confirmation message	Pass
TC-051	Verify invalid coupon code handling	User is logged into the Swiggy, has at least one food item in the cart, and has proceeded to the Checkout page	1. Open the Checkout page 2. Tap apply coupon 3. Enter an invalid or expired coupon code 4. Tap Apply	The application should reject the invalid coupon code, display an appropriate error message, and should not apply any discount	The application rejected the invalid coupon code, displayed an appropriate error message, and no discount was applied	Pass
TC-052	Verify discount calculation after coupon application	User is logged into the Swiggy, has at least one food item in the cart, and has proceeded to the Checkout page	1. Open the checkout page 2. Apply a valid coupon code 3. Observe the discount and the updated payable amount	The application should calculate the discount correctly and update the final payable amount accordingly	The application calculated the discount correctly and updated the final payable amount accordingly	Pass
TC-053	Verify user can re-order previously placed order	User is logged into Swiggy and has at least one previously completed order	1. Open the Swiggy 2. Navigate to the My Orders section 3. Select a previously	The application should add all items from the previously placed order to the cart, allowing the	The application added all items from the previous order to the cart successfully,	Pass

			completed order 4. Tap the Reorder 5. Review the cart	user to proceed with the order.	allowing the user to proceed with the order.	
TC-054	Verify updating the user's name	User is logged into the app	1. Open the Swiggy 2. Navigate to profile 3. Tap edit profile 4. Update the user's name. 5. Save the changes	The application should save the updated name successfully and display it in the user's profile	The application saved the updated name successfully and displayed it correctly in the user's profile	Pass
TC-055	Verify switching between saved delivery addresses	User is logged into the app and has two saved delivery addresses in different localities.	1. Open Swiggy 2. Click on the selected location 3. Tap on the other saved address	The application should update the selected delivery address successfully and display restaurants available for the newly selected location	The application updated the delivery address successfully and displayed restaurants available for the selected location	Pass
TC-056	Verify logout functionality	User is logged into the app	1. Navigate to Settings 2. Tap the logout option 3. Confirm the logout action when prompted	The application should display a logout confirmation dialog. Upon confirmation, the user should be logged out successfully, the current session should end, and the user should be redirected to the Login screen	The application displayed the logout confirmation dialog, logged the user out successfully, ended the current session, and redirected the user to the Login screen	Pass

Note: Payment-related test cases were documented based on the expected application workflow. Actual payment execution was not performed to avoid placing unintended orders.

6. UI Findings

ID	Observation	Severity	Recommendation
UI-001	Promotional banners occupy a significant portion of the Home screen, requiring additional scrolling to view restaurants.	Low	Reduce banner height or limit the number of banners displayed.
UI-002	Some restaurant cards contain long names that wrap onto multiple lines, making the layout appear inconsistent.	Low	Truncate long names with an ellipsis or standardize the card layout.
UI-003	Discount labels and promotional badges can become visually crowded when multiple offers are displayed on a restaurant card.	Low	Improve spacing or prioritize the most relevant offer.

7. Usability Findings

ID	Observation	Impact	Suggestion
US-001	Location selection is quick and intuitive.	Positive	No change required.
US-002	Search results appear almost instantly for common restaurant names.	Positive	Maintain current performance.
US-003	Users can easily switch between delivery addresses during checkout.	Positive	No change required.
US-004	Filters are easy to access and understand.	Positive	Continue using the current design.

8. Exploratory Testing

ID	Test Performed	Expected Behavior	Observed Behavior	Status
EX-001	Switched between Wi-Fi and mobile data while browsing restaurants.	The application should continue functioning normally or refresh content appropriately.	The application refreshed the content without crashing.	Pass
EX-002	Rapidly tapped the ADD button for a food item multiple times.	The application should handle repeated taps correctly without adding unintended quantities.	The application responded correctly and updated the cart appropriately.	Pass
EX-003	Minimized the application while browsing a restaurant and reopened it after a few minutes.	The application should retain the user's current state without data loss.	The application resumed at the previously viewed restaurant page.	Pass

9. Bug Report

No functional or critical defects were identified during the executed test scenarios. Minor UI/usability observations have been documented separately.

10. Project Summary

Test Execution Summary	Count
Total Test Scenarios	56
Total Test Cases	56
Executed Test Cases	56
Passed	56
Failed	0

11. Tools Used

Tool	Purpose
Android Device	Mobile application testing
Swiggy Application	Application under test
Google Docs	Test documentation
Microsoft Excel / Google Sheets	Test case management
Chrome DevTools	UI inspection (if applicable)

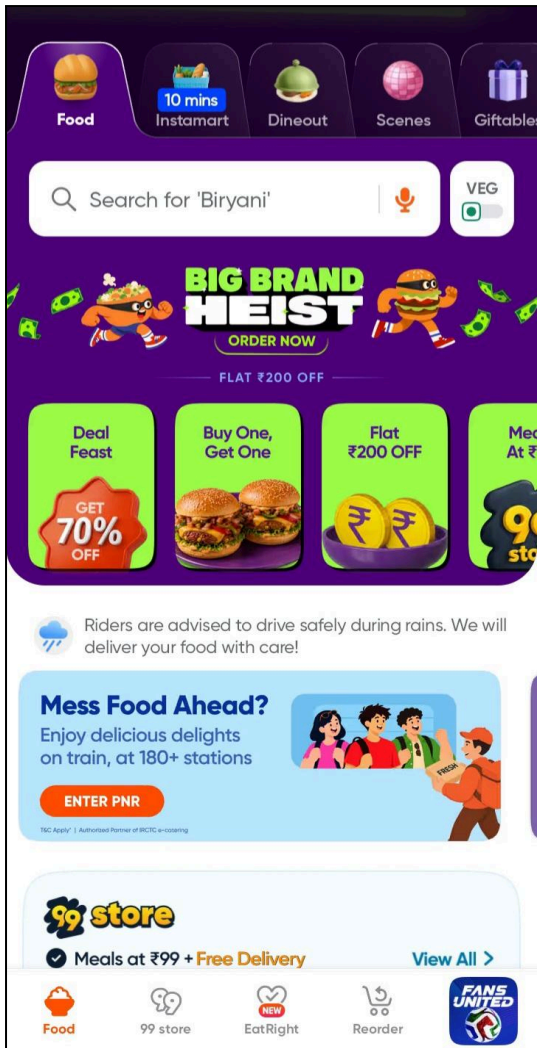

12. Conclusion

The Swiggy mobile application was tested through manual functional testing across key modules, including authentication, location management, restaurant browsing, search, cart management, checkout, payment options, order tracking, notifications, profile management, and account settings. A total of 56 test cases were designed and executed to validate the core functionality and user workflows.

During testing, the application's primary features functioned as expected, providing a smooth and consistent user experience. UI and usability observations identified during testing have been documented separately, along with the results of exploratory testing. No critical functional defects affecting the core user journey were identified during the scope of this testing.

Overall, the application demonstrated stable performance, intuitive navigation, and reliable functionality across the tested features, making it a well-designed and user-friendly mobile application from a manual testing perspective.
